Salesforce Developer

Information Technology Santa Clara, California

Description

Palo Alto Networks® is the fastest-growing security company in history. We offer the chance to be part of an important mission: ending breaches and protecting our way of digital life. If you are a motivated, intelligent, creative, and hardworking individual, then this job is for you!

The Salesforce Solution Developer will interface directly with business users and the Enterprise Business Systems Analysts to understand and document business requirements, define solution architecture, create technical specifications/documents, design, develop and implement solutions focused on the Salesforce platform to meet business needs.

The role requires an open communication style and collaborative manner. Someone in this position must lead by example, being both customer-centric and service minded, able to interact with all levels of users (end-users/executives), analysts and technical colleagues creating consensus and clear strategy where appropriate.

Responsibilities:

- Deliver scalable, high-quality Salesforce services in support of our company mission
- Design, develop, test, and document scalable, high-quality business solutions on the Salesforce platform
